9. ☐ Other _____.

DETAILED ACTION

This is in response to communication filed on 12/5/03 in which claims 1-21 are pending. The application has been fully considered therefore this case is in condition for allowance.

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: The prior arts of record fail to anticipate or render obvious the following recited features: and calculating a difference between the derived input signal based on a substantially lossless communication channel propagation delay and the sampled output signal to identify the ISI jitter effect contribution to timing skew as recited in claim 1. A plurality of gates operably coupled to the receiver and the transmitter, the plurality of gates operable to identify characteristics of the communication link under substantially lossless conditions, identify characteristics of the communication link under lossy conditions, identify an input signal from the lossy characteristics of the communication link and a sampled output signal and compare the input signal based on the characteristics of the communication link under substantially lossless conditions and the sampled output signal to quantify the ISI jitter contribution to communication link timing skew as recited in claim 7. Determine a timing offset between the derived input and the sampled output signal, the timing offset representing an intersymbol interference jitter effect contribution to a communication channel timing skew budget as recited in claim 15.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
